ipelcaztreortega@gmail.com | [LinkedIn](#) | [GitHub](#) | [Website](#) | Atlanta, GA

EDUCATION

Georgia Institute of Technology

M.S. in Computer Science, Specialization: Computing Systems | GPA: 3.79

Atlanta, GA

Expected Spring 2027

Georgia State University

B.S. in Computer Science, Focus in Data Science | GPA: 4.02

Atlanta, GA

December 2024

EXPERIENCE

Bimini AI Startup

May 2024 – January 2025

Software Engineer Intern (Promoted to Team Lead)

Remote

- Engineered a **React Vite + Firebase** analytics dashboard to capture 100+ monthly front-end events, enabling data-driven product decisions for physicians; visualized real-time metrics with **Chart.js**
- Designed and implemented **Firestore** event logging schemas and API integrations to support structured data collection, serving as a foundation for downstream analytics workflows
- Promoted to **Team Lead**; coordinated Agile feature delivery across engineering and stakeholder teams for a Reddit-style discussion platform, translating requirements into scalable solutions

CodePath

August 2023 – December 2023

Web Development Tech Fellow – Web 101

Remote

- Led technical instruction for **24 students** across 4 pods, conducting code reviews and guiding implementation of projects in **JavaScript, HTML, and CSS** within a **Linux** development environment
- Defined weekly checkpoint goals and facilitated pair programming sessions, unblocking students on debugging challenges in real time across structured breakout sessions
- Provided written feedback on student code via Slack to a **300+ student** cohort, reinforcing best practices in frontend development

PROJECTS

Medical Claims ETL Pipeline | Python, PySpark, AWS S3, PostgreSQL, Docker

- Built a batch **ETL pipeline** to ingest and transform synthetic medical claims data using **PySpark**, loading cleaned records into a **PostgreSQL** database
- Applied data validation checks to identify null values, duplicate records, and malformed claim entries prior to loading
- Used **AWS S3** to store raw and processed data files and **Docker** to containerize and run the pipeline in an isolated environment
- Wrote **SQL** queries to generate payer and provider summary reports from the cleaned claims data

Fintech Payment Management Application | Java, Spring Boot, PostgreSQL, React

- Built a full-stack payment platform with **Spring Boot REST API** and **PostgreSQL** backend; implemented account creation, payment processing, and transaction tracking with data consistency logic
- Validated endpoints using **Postman** and integrated frontend data consumption via Axios; designed schema to maintain accurate and auditable transaction records

Hospital Management System | PostgreSQL, Express, React, Node.js, TypeScript

- Designed and optimized a **PostgreSQL** schema across 8+ interconnected tables, achieving 50ms average query response time while maintaining **HIPAA compliance** and data integrity
- Built full-stack CRUD REST API for managing appointments, doctors, and patients – directly applicable to medical claims data workflows

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript, HTML/CSS

Data & Pipeline: PySpark, Apache Spark, Hadoop, NumPy, Pandas, Matplotlib, Scikit-learn

Databases: PostgreSQL, MySQL, Firebase Firestore

Cloud & Infrastructure: AWS S3, IAM, Docker, Kubernetes, Linux (Ubuntu, Arch), Vercel

Frameworks & APIs: Spring Boot, React, Node.js, Express.js, Next.js, FastAPI, REST APIs

Tools & Workflow: Git, Postman, Agile/Scrum, TDD, CI/CD, AI-assisted dev tools (Copilot, ChatGPT API)

Concepts: ETL/ELT Pipelines, Data Validation, Distributed Systems, SDLC, HIPAA Compliance, OOP
